A study entitled

Generalist Social Work Practice To Improve Quality of Life For the Visual Impaired

*Experimental study applied to the Al Noor for the Blind
in Fayoum Governorate*

*Within the requirements to obtain the degree
of Doctor of Philosophy in Social Work*

Preparation

Saad Eid kasem Zeidan

Supervision

D: Bawab Shakir Ali

*Professor and Vice Dean for Graduate
Studies and Research
Faculty of Social Work
Fayoum University*

D : Mahmoud Fathy Mohamed

*Assistant Professor,
Department of social work Fields
Faculty of Social Work
Fayoum University*

Summary

First: The Problem of the Study :

The development will all its aspects represents a strategic aim which any society try to achieve the human being is the true pushing plover to this process. So the interesting developing the human resources is the target and the means of the process of development . The safety of the society lies in the safety of its people. The human resources represent the best ones for any society. More- over the disability in human resources cause many uncountable bad effects, So, the cause of disability worries the society and makes a lot of problems.

The variety in the categories of disables such as Visual Impaired. Mental disables and movement disables etc... , the visual disability tops all of them. The visual ability affects greatly upon the personality of the blind. His family and generally all the society.

The concept of the quality of life is one the recent modern ones which aims the developing and discovering his abilities. The concept of the quality of life express the satisfy captions which achieved so it can be a self expression for the person him self and his abilities to benefit from the available services for many times at high efficiency to achieve the hoped targets.

Although the highly exerted efforts to the Visual Impaired. They face a lot of problems which affects upon their quality of life. According to that point. All the researchers wants to design programmers to enhance the quality of life from the social life which depends omits strategies, tools and its professional methods.

Second : The Aims of the Study :

This study aims at achieving a central aim, which's " the relationship between the Generalist Social Work Practice and Improving the quality of life for the Visual Impaired". Also many supporting aims come out of this central former aims.

- 1- Testing the relationship between the Generalist Social Work Practice and Improving the quality of the family life for the Visual Impaired.
- 2-Testing the relationship between the Generalist Social Work Practice and Improving the quality of the educational life for the Visual Impaired.
- 3- Testing the relationship between the Generalist Social Work Practice and Improving the quality of the qualifying life for the Visual Impaired.
- 4- Testing the relationship between the Generalist Social Work Practice and Improving the quality of the healthy life for the Visual Impaired.

Third : Hypotheses of the Study :

This study is based on the suggestion of the relation between the Generalist Social Work Practice and Improving the quality of life for the Visual Impaired , This suggestion is tested through testing these other secondary suggestions:

- 1-There is a relation between the Generalist Social Work Practice and Improving the quality of the family life for the Visual Impaired.
- 2-There is a relation between the Generalist Social Work Practice and Improving the quality of the educational life for the Visual Impaired.
- 3-There is a relation between the Generalist Social Work Practice and Improving the quality of the qualifying life for the Visual Impaired.
- 4-There is a relation between the Generalist Social Work Practice and Improving the healthy life for the Visual Impaired.

Fourth : The Concept of the Study :

- 1- The concept of the Visual Impaired.
- 2- The concept of the quality of life.

Fifth : Methodological Procedure of the Study :

1- The Kind of the Study :

This study is related to the measuring studies according to the nature of the study which the researcher aims to test, through the relation between the independent ant factor, the interfering programs and the dependant factor, Improving the quality of life for the Visual Impaired.

2) Method Used :

Supports a researcher at the current research on the use of experimental method has been used as an experimental researcher determined a posteriori using the tribal experience of one group

3) Tools of the Study :

- 1- Simple observation.
- 2- Measure the quality of life for the visually impaired

4) Areas of Study :

a) Spatial Scope of the Study :

Represents the spatial scope of the study in Al-Nour School to care of visually impaired in fayoum.

b) The Human Sphere of the Study :

The researcher has the application of the current research on a sample of 20 students at Al-Nour in fayoum governorate in the age group from (15-20) years.

c) The Time Interval of the Study :

This is a period in which the researcher collected specified Material to a period of professional in starvation, draw conclusions and extended the period from October 2007 until January 2010.

Sixth : The Results of the Study :

- 1) The study proved the health of the main hypothesis is there may be correlation between the Generalist Social Work Practice and improve the quality of life for the visually impaired.
- 2) The study proved the health of the first sub- hypothesis is there is a correlation between the Generalist Social Work Practice and improve the quality of family life for the visually impaired.
- 3) The study proved the heath of the second sub-hypothesis is there is a correlation between the Generalist Social Work Practice and improve the quality of education life for the visually impaired .
- 4) The study proved the health of the Fourth sub-hypothesis is there is a correlation between the Generalist Social Work Practice and improve the quality of qualifying life, for the visually impaired.
- 5) The study proved the heath of the third sub-hypothesis is there is a correlation between the Generalist Social Work Practice and improve the quality of health life for the visually impaired .
