

Answer the following questions:

- 1- Write a paragraph on One only of the following :
- a/ Bringing up children.
 - b/ Fears of children.

2- Read the following passage then answer the questions:

Many companies have now computerized their accounting procedures because computers can do the work more quickly and more accurately than people. The work the computer does (storing information, finding the right information and doing calculations) is called data processing. The part of the computer that processes the data is called the CPU (central processing unit). This contains only electronic components called microchips.

The instructions that are stored in a computer are called the computer programme. The people who write these instructions and put them in the computer are called computer programmers. The parts of the computer that most people use are called terminals. The terminals are usually a keyboard, and a VDU (visual display unit), which looks like a television, or a printer. When computers go wrong, it is usually because there is something wrong with the input.

- 1- Why do many companies use computers?
- 2- Does a VDU look like a typewriter ?
- 3- What would happen if you put the wrong input into a computer?
- 4- What are microchips ?
- 5- What do computer programmers do?

3- Translate the following into Arabic:

When early humans hunted and gathered food, they were not in control of their environment. They could only interact with their surroundings as lower organisms did. When humans learned to make fire, however, they became capable of altering their environment. To provide themselves with fuel they stripped bark from trees, causing the trees to die.

- 4- Discuss the three essential parts that compose any paragraph.
