Answer the following questions:

1- Write a paragraph on one only of the following:

        a / University life.

        b / Education.

2- Read the following passage then answer the questions below:

    A computer is an electronic machine that accepts, processes, stores and outputs information. A typical computer consists of two parts: hardware and software. Hardware is any electronic or mechanical part of the computer system that you can see or touch. Software is a set of instructions, called a program, which tells a computer what to do. There are three basic hardware sections:

1- The CPU is the heart of the computer, a microprocessor chip which processes data.

2- The main memory holds the instructions and data which are being processed by the CPU.

3- Peripherals are the typical units attached to the computer. They include devices, which let us enter data and commands , and output devices which let us extract the results. At the back of a computer there are ports into which we can plug external devices(e.g. a scanner, a modem, etc.). They allow communication between the computer and the devices.

1- What is a computer ?

2- What are the two main parts of a computer ?

3- What is hardware ?

4- What is the use of software ?

5- What are the tree basic sections of hardware ?

3- Correct the mistakes in the following sentences:

    a/ The frightening child ran away from the dog.
