**Abstract**

**A sense of security is one of the human goals in his life. which it seeks to achieve; Man, by nature, always needs protection in a shelter that provides him with stability and security. This study is considered one of the important studies because it studies the procedures followed by Muslim rulers when constructing their cities. According to the geographers. This study aims to show the extent to which the ruling authority and the Muslim architect interact with the surrounding environment, and how security has been achieved in Islamic cities. In this study, the descriptive analytical method was followed. The study concluded that the cities that were built according to the conditions set by Muslim geographers, achieved all kinds of security.**
