Abstract:

This paper aims to study a tray, made of tinned copper, from the manufacture of Egypt, in the Ottoman period, preserved in Al-Ashmunein storehouse, in Mallawi town - Minia Governorate - Egypt, this tray is published and studied for the first time. The study based mainly on the analytical approach. This study included an explanation of the materials, techniques of manufacturing and decoration, and the functional values of this tray. The study, also, dealt with the decorative elements, of this tray; inscriptions were explained, in terms of form and content, these inscriptions included a formula of the ownership, as well as, another one of some relations between people, through career titles. The study discussed the relationship between the history of manufacture and the history of ownership, and proved that there is often a time difference between them; in the light of that, the study dated this tray back. The study, also, highlighted the floral and geometric decorations, then, explained, and rooted the general decorative design of this tray. The study determined the provenance of this tray, and proved that it made in Egypt.
