

The effectiveness of a program based on motor games in the development of thinking Green child kindergarten

Dr. Aliaa Abdel Moneim Mohamed

Dr. Sahar Fathi Abdel Mohsen

Search Goal:

The current research aims to identify the effectiveness of a program based on kinetic games in the development of green thinking in the kindergarten child.

Research Methodology:

The researchers used the experimental approach, which depends on the design of the experimental group with the tribal and remote criteria, in order to suit the nature of the research and to achieve its goals and objectives.

research community:

The research community was selected from Kindergarten Children at the second level between (5-6) years as the kindergarten of the Directorate of Education in Fayoum Governorate for the academic year 2016/2017.

The research sample:

The study sample included children of the second level in kindergartens between the ages of 5-6 and 30 children and 8 children to conduct scientific research.

CONCLUSIONS:

The proposed kinetic games program has a statistically significant positive effect on the experimental group of green thinking in the children under study.
