Abstract:

The objective of this research is to identify the nature of student activities and sustainable development and the theories associated with each, and to find out the role of student activities in facing some of the social problems that hinder achieving sustainable development and thus know the reality of achieving the student activities at Fayoum University for the purposes of sustainable development In order to develop mechanisms that may be useful in activating the role of student activities in achieving some of the objectives of sustainable development. The research was based on the case study method. The research found that the student activities contribute

moderately to achieving some of the goals of sustainable development such as gender equality and contribute to health education through seminars, artistic performances and literary competitions, the research recommended the need to increase environmental awareness and values and help people with special needs and mechanisms of cooperation with various community institutions dialogue.
