Abstract:

The technological development of human societies is one of the main factors that contributed to the concept of social isolation through using the Internet, which contributed greatly to the creation of a kind of social isolation, which is known as the "electronic isolation" of young people due to the high rates of Internet use of the conversation Within the electronic

community; which reflected negatively on the social relations between individuals, especially students in secondary education because of the loss of so-called social interaction between them; which contributed to the creation of some kind of apathy and social isolation, and then the goal of this research to activate the educational role of secondary school in alleviating social isolation resulting from the use of its students for the technology of modern communication in Egypt, drawing on the light of experience of China and South Korea, the research depended on the comparative approach, and found to visualize a proposal to activate this role.
