

**A proposed vision from the perspective of social group work to  
develop the awareness of social workers working with youth care  
about the negative effects of the carbon footprint**

**Summary**

The current study aimed to develop the awareness of social workers working in youth care at the university about the negative effects of the carbon footprint. The current study is one of the types of descriptive studies, as the study relied on a comprehensive social survey approach for social workers working in youth care departments at Fayoum University, numbering (76) social worker. The study relied on a scale to measure the awareness of social workers working with youth care at Fayoum University about the effects of the carbon footprint. The study reached several results, the most important of which are: developing a proposed vision for developing the awareness of social workers working with youth care at Fayoum University. Social workers do not have sufficient awareness of the correct behaviors to mitigate the negative effects of the carbon footprint.
