Fayoum University**

**Abstract:**

The curriculum of knitting is one of the decisions of the Faculty of Specific Education Department of Home Economics, which is taught to the second division in both theoretical and applied. The course aims to develop the skills of students in the art of manual and mechanical knitting by applying a number of different stitches according to the description of the course. The research problem is summarized in the following questions: Is it possible to take advantage of samples of knitting stitching to implement products of useful value and achievement of the aesthetic and functional aspects.

The aim of the research is to benefit from the pre-preparation samples of the knitting course for the implementation of products of useful value and the use of these products in practice. The importance of the research is to employ the pre-preparation samples for the knitting course in the implementation of products of useful value that can be marketed with the guidance of the students' thought to the need to recycle the samples of various practical courses in a utilitarian manner. The research was conducted on the Second Division Department of Home Economics Faculty of Specific Education Fayoum University the first semester of the academic year and the arbitration of products by specialized and non-specialized referees (consumers) 2016/2017, and statistical analysis using the statistical package (spss16.0) to analyze the results.
