

Abstract:

The study is based on applying Robert Loth's theory in his study of the Hebrew Hebrew poetry in the Old Testament (the Torah).

Where Robert Loth pointed out that the verse in the Torah was based on a clear lineage structure.

Robert Loth divided the analog structure in the Torah into three aspects: Contrast analog. Tandem analog. Synthetic analog.

In the case of Robert Loth's theory, this study consisted of an introduction, three topics, and a conclusion.

The introduction addressed the topic of the study, its most important terms, curriculum, difficulties and previous studies.

The first topic dealt with the issue of comparing the Qur'an and the Torah in the analog symmetric structure.

The second topic deals with the issue of comparing the Qur'an and the Torah in the analog tandem structure.

The third topic deals with the issue of comparison between the Qur'an and the Torah in the synthetic analog.

The conclusion covered a summary of the research and its most important results.
