Title of Thesis : **Urban Design & Gave The User Needs**

Key Words: **urban design , space , users needs**

Summary:

After the wrong use of knowledge of the urban design and putted in short view as a form side only , and ignore the interest of the user needs. From here came the

main idea of the research to coordinate the urban designer and the user needs and tray to put steps to be the size of projects efficiency, this come from put clear knowledge of the urban design and importance and the most theories which take it. Then make the link between both sides. And tray to know how the architectural think and fixed the conflict between the designer and the user and put the lonely language to them to be the bias for architectural and receiver and tray to get steps can be used for all urban projects and reach the results and recommendation .
