الملخص باللغة الإنجليزية:

Inflation is conspicuously defined as the increasing rise in the prices of consumer goods. This definition is one of the simplest definitions of inflation, economic inflation affects the rise in prices; reduction in the purchasing value of money and the tourism industry, especially in developing countries, as Egypt. Internal tourism has become closely linked to economic development, and it is one of the main elements of economic activity in tourist countries. Economic inflation leads to significant problems in the travel market due to the reluctance of many travelers to travel. Their decision is to postpone travel, which greatly affects the economics of many tourist destinations. The problem of the study can be determined by the low demand for Internal tourism in Egypt due to the increase in the economic inflation rates under conditions that Egypt suffers as a tourist destination affected by the demand for tourism coming to Egypt. The quantitative approach is used to collect data on the study and analyzing it along with drawing conclusions from it. This study tries to find logical solutions to reduce these negative effects on the economics of the industry of tourism and what are the alternatives to the development of internal tourism in light of the continued rates of economic inflation and what mechanisms to develop economic plans to reduce inflation itself. The field study will be implemented through the design of survey form for Egyptian citizens who have carried out internal tourism in recent years along with a survey form.
